JOYO Firmware update - PreAmp House

Step 2 - Install the firmware to the pedal

- Connect R-15 PreAmp House with a micro usb to your computer

- Hold down the two footswitch buttons on the pedal and then insert the power supply to the pedal. This will enter into update mode and the led will flash.

- Off the desktop the software will have installed a shortcut R15_V1.2.0

→ double click on it to update

- When you see the UPDATE pop up Click in the START button

UPDATE COMPLETED - Unplug from the computer !

DO NOT cut off the power supply during update
